Through the Australian Curriculum, the ICT curriculum is changing, with the Digital Technology component recently endorsed. The new curriculum will equip children with the skills they need to become active participants of this fast-paced digital world.

Code Club teaches the children much more than how to programme a computer. The projects are fun, creative and will help your child understand how to solve problems by breaking them down into smaller problems. In the first instance, we will be learning to program using software called Scratch.

Scratch is a downloadable program for your Windows, Linux or Mac that makes it easy for your children to program their own interactive stories, games and animations, through colourful drag- and-drop blocks. It comes with some background images, characters and sounds ready to use, but you can also add your own images and sounds, making it even more fun! You can also use Scratch with a web browser using an internet connection. For further information about Scratch, visit <http://scratch.mit.edu>

We have an extensive and well developed off stage team that is responsible for all areas of backstage. This commitment can vary from the start of the process attending every week building the show or joining at the end of Term 2 start of Term 3 for the peak production time. It is a great opportunity to use other talents such as artistic, construction, design and organisation.
